50Days-coding-challenge

Day-28[Python]

Ride Booking Data Analysis

Name:M NITHIN

Insurance Claims Analysis – Coding Challenge (Using Lists)

You are a **Data Analyst** working for an insurance company. You received raw claim data stored in lists.

Dataset (Lists)

policy_ids = [101, 102, 103, 104, 105, 106]

claim_amounts = [5000, 15000, 7000, 20000, 3000, 12000]

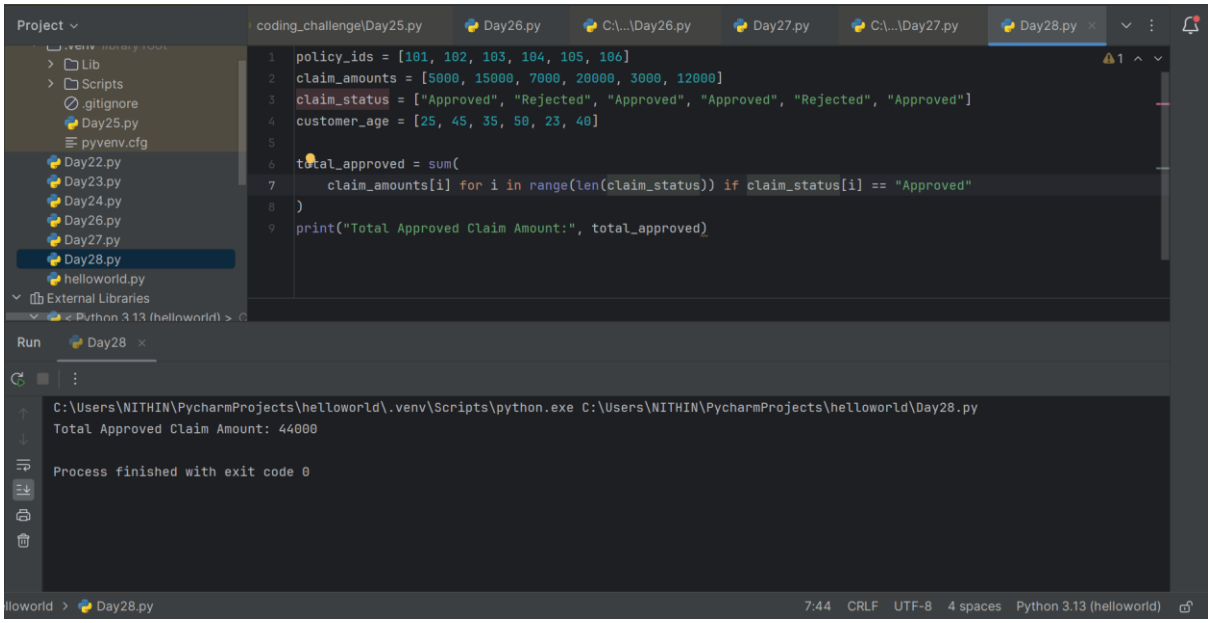
claim_status = ["Approved", "Rejected", "Approved", "Approved", "Rejected", "Approved"]

customer_age = [25, 45, 35, 50, 23, 40]

Tasks

Task 1: Total Approved Claim Amount

Calculate the **total claim amount** for all *Approved* claims.



Task 2: Count Rejected Claims

Find how many claims are **Rejected**.

```python
claim_amounts = [5000, 15000, 7000, 20000, 3000, 12000]
claim_status = ["Approved", "Rejected", "Approved", "Approved", "Rejected", "Approved"]
customer_age = [25, 45, 35, 50, 23, 40]

total_approved = sum(
    claim_amounts[i] for i in range(len(claim_status)) if claim_status[i] == "Approved"
)
print("Total Approved Claim Amount:", total_approved)

rejected_count = claim_status.count("Rejected")
print("Rejected Claims:", rejected_count)
```

```
C:\Users\NITHIN\PycharmProjects\helloworld\.venv\Scripts\python.exe C:\Users\NITHIN\PycharmProjects\helloworld\Day28.py
Total Approved Claim Amount: 44000
Rejected Claims: 2

Process finished with exit code 0
```

Task 3: High-Value Claims

Print all **policy IDs** where claim amount is greater than **₹10,000**.

```python
claim_amounts[i] for i in range(len(claim_status)) if claim_status[i] == "Approved"
)
print("Total Approved Claim Amount:", total_approved)

rejected_count = claim_status.count("Rejected")
print("Rejected Claims:", rejected_count)

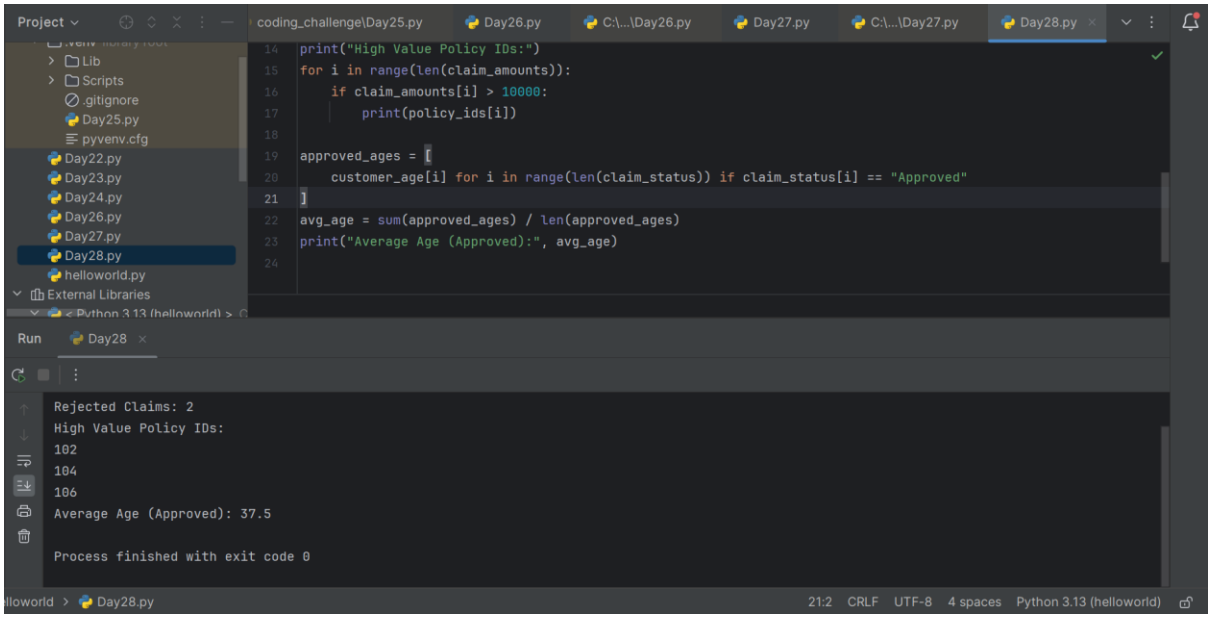
print("High Value Policy IDs:")
for i in range(len(claim_amounts)):
    if claim_amounts[i] > 10000:
        print(policy_ids[i])
```

```
Total Approved Claim Amount: 44000
Rejected Claims: 2
High Value Policy IDs:
102
104
106

Process finished with exit code 0
```

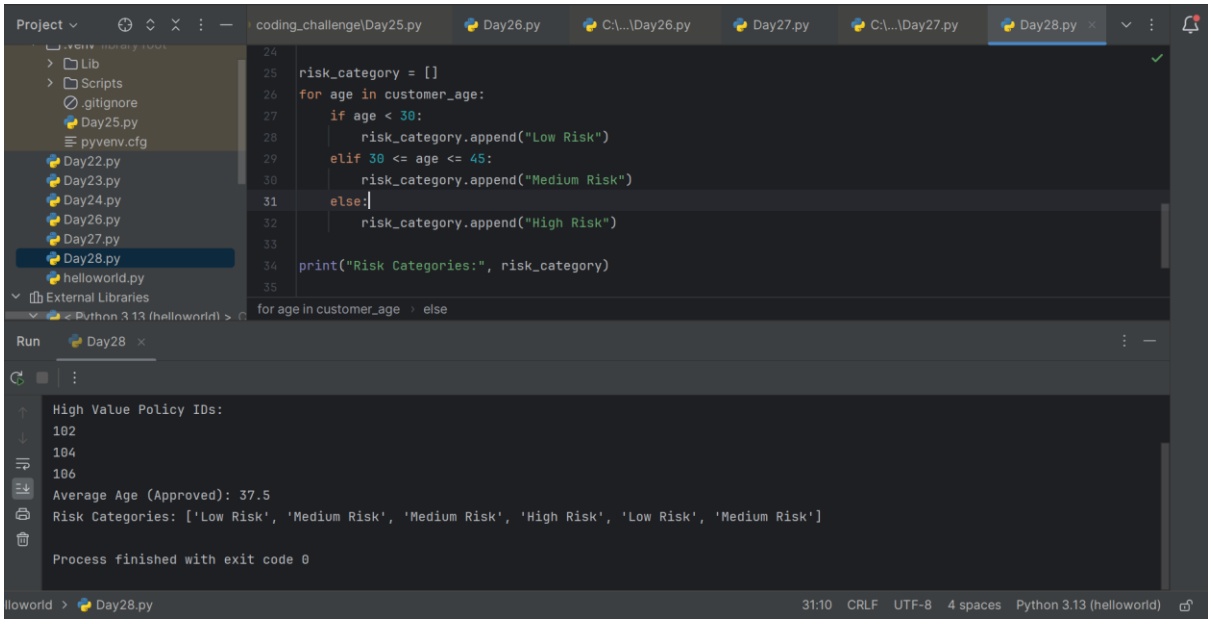
Task 4: Average Age of Approved Customers

Find the **average age** of customers whose claims are *Approved*.



Task 5: Risk Category Tagging

Create a new list called risk_category:

Age < 30 → "Low Risk"


Age 30–45 → "Medium Risk"
